Year (Final B.Tech)
Advanced Unix Programming (AUP)
Lab 10

Write a program to implement the following:

- 1. A pipe setup is given below that involves three processes. P is the parent process, and C1 and C2 are child processes, spawned from P. The pipes are named p1, p2, p3, and p4. Write a program that establishes the necessary pipe connections, setups, and carries out the reading/writing of the text in the indicated directions.**
- 2. Let P1 and P2 be two processes alternatively writing numbers from 1 to 100 to a file. Let P1 write odd numbers and p2, even. Implement the synchronization between the processes using FIFO.**
- 3. Implement a producer-consumer setup using shared memory and semaphore. Ensure that data doesn't get over-written by the producer before the consumer reads and displays on the screen. Also ensure that the consumer doesn't read the same data twice.**
